

Complete Feature Implementation Report

What was built across Customer, Vendor, and Super Admin — prepared for Team Lead review.

PROJECT

LuxeHalls — Wedding Hall Marketplace

DOCUMENT DATE

10 September 2026

PREPARED FOR

Team Lead

PREPARED BY

Ameen — Developer

APPLICATION VERSION

1.0.1

PURPOSE

Full feature inventory of implemented work

This document lists working product features in the current codebase. It is a delivery report, not a marketing brochure.

1. Project overview

LuxeHalls is a multi-role marketplace for wedding and banquet halls. Customers discover and book venues. Vendors list halls, manage availability, and handle bookings. Super Admin governs the platform — vendor approvals, halls, payments, offers, support, and reports.

3

USER ROLES

Customer / Vendor

/ Admin

SEPARATE PORTALS

End-to-end

SEARCH → BOOK → APPROVE → INVOICE

Layer	Technology
Backend	Laravel 12 (PHP 8.2+)
Frontend	React 18 + Inertia.js + Tailwind CSS
Auth & roles	Laravel Breeze + Spatie Permission (Admin, Vendor, Customer)
Maps	Leaflet (hall location on venue page)
Payments	Simulated checkout (Razorpay-style flow, dummy transaction IDs)

2. Role-based access

Each role has its own login and is locked to its own panel.

Role	Entry URLs	After login
Customer	/register, /login	Public site + Customer dashboard
Vendor	/vendor/register, /vendor/login	Pending Approval until Admin verifies, then Vendor panel
Admin	/admin/login	Admin Portal dashboard

Shared: profile edit, password change, forgot/reset password, logout. Vendors cannot use the dashboard until Super Admin approval.

3. Customer — complete features

The customer side is the public marketplace plus a logged-in account area.

3.1 Public discovery (no login required)

- **Luxury homepage** — editorial hero, glassmorphic search, event types (Wedding / Reception / Engagement), featured and popular halls, active offers, approved reviews.
- **Search by location and date** — city/area text search, optional GPS “current location” with radius (default 25 km using hall lat/lng), event date that hides halls already booked for a full day.
- **Venue collection** — magazine-style grid of live halls only (status = live).
- **Hall profile** — cover photo, type, rating/reviews, address, capacity, slot pricing (morning / evening / full day), security deposit, policies (timing, veg/non-veg, catering, alcohol, music), Leaflet map, date + slot picker that greys out booked slots.
- **Offers page** — browse platform promotions created by Admin.

3.2 Booking journey (login required)

Browse / Search hall → Hall detail → Choose date & slot → Booking form (event type, guests, contact) → Checkout (rent + deposit, 40% advance) → Simulated payment → Booking created as **pending** → Vendor must confirm.

- Booking form captures event type, date, slot, guest count, name, phone, email, special requirements, optional promo code.
- Checkout shows base rent, security deposit, total, and 40% advance payable.
- Payment creates a booking code (BK-XXXXXX), a payment record (TXN-..., method “Razorpay Simulated”), and locks the calendar slot as pending.
- Customer is redirected to the booking detail page with “awaiting vendor approval”.

3.3 Customer account

Screen	What the customer can do
Dashboard	See total / upcoming / completed bookings, wishlist count, next confirmed event, platform notifications.
My Bookings	List and filter by status; open booking detail.
Booking detail	View hall, vendor, amounts, payment status, and booking status.
Cancel booking	Cancel with a reason; calendar slot is released.
Invoice	Open a printable invoice for the booking.
Wishlist	Save / remove favourite halls; browse saved venues.
Reviews	Submit 1–5 star rating and review text on a hall.

Profile	Update name/email, change password, delete account.
---------	---

4. Vendor — complete features

Vendors list halls and operate bookings. A new vendor cannot go live until Super Admin approval.

4.1 Onboarding

- **Vendor registration** — split-screen UI; fields: name, email, password, business name, phone.
- Account is created with role Vendor. Vendor profile is saved as **verification_status = pending**.
- **Pending Approval page** — unapproved vendors are blocked from dashboard, halls, calendar, bookings, finance, and subscription by middleware.
- **Vendor login** — dedicated /vendor/login screen.
- After Admin approval, vendor can use the full panel.

4.2 Dashboard

- Metrics: total bookings, upcoming confirmed events, pending bookings, completed bookings, monthly revenue, hall count, subscription status.
- Recent bookings list and halls overview.

4.3 Hall management

- **Add / edit / delete / preview** halls.
- **Cover photo** upload.
- **Basic info:** name, hall type, description, contact, email, address, city (used in customer search), area, pincode, map URL, landmark.
- **Capacity:** seating, dining, floating, min/max guests.
- **Pricing:** base, morning, evening, full-day, weekday, weekend, security deposit.
- **Policies:** event timing, veg / non-veg, outside catering, outside decorator.
- **Amenities** — select from master list; option to add a custom amenity.
- **Subscription hall limit** — cannot add more halls than the active plan allows (default 1 if no plan).

4.4 Availability calendar

- Month calendar per hall.
- Block or unblock morning / evening / full-day slots (with optional reason).
- Online and offline bookings automatically mark dates as booked and free them on cancel/reject.

4.5 Bookings

- List all bookings; filter by status.
- **Confirm, reject, cancel, or complete** a booking — calendar stays in sync.
- **Offline booking** — vendor records a walk-in/phone booking (customer name, phone, event, date, slot, guests, amount, advance). Status starts as confirmed; code prefix BK-OFF-; calendar locked as booked.

4.6 Customers, finance, subscription

Module	What the vendor can do
Customers	See customers who booked this vendor's halls.
Finance & Revenue	Today / month / year / total revenue, pending balance, transaction list by booking.
Subscription	Choose a plan; dummy payment activates a 1-year subscription and generates a payment ID. Plan hall_limit controls how many halls they may list.

5. Super Admin — complete features

Admin Portal is a full operations console. Access: /admin/login, role Admin only.

5.1 Dashboard

- KPIs: total vendors, pending vendors, total halls, pending halls, live halls, total bookings, completed-payment revenue, total customers.
- Queues: latest pending vendors and pending halls (quick approve).
- Recent activity log.

5.2 Vendor management

- Directory with status filter (pending / approved / etc.).
- Vendor detail: business profile, halls, subscription, bookings.
- **Approve** new vendors (unlocks Vendor panel).
- **Suspend** and **activate** vendor accounts.
- Actions written to the activity log.

5.3 Hall verification

- All halls with status filter (draft / pending_review / live).
- Review screen with media, amenities, pricing, policy, availability, reviews.
- **Approve** → hall goes live on the customer site.
- **Request changes** or **reject** with reason.

5.4 Bookings, customers, subscriptions

- **Booking ledger** — all platform bookings; Admin can cancel a booking.
- **Customer directory** — list customers; toggle active / blocked.
- **Subscriptions & plans** — create and update subscription plans (name, price, hall limit, features).

5.5 Payments, reviews, offers, support, reports

Module	What Admin can do
Payments & Refunds	See all payments and refunds; approve or reject a refund with reason.
Reviews	Moderate review status; delete a review.
Offers & Promos	Create offers, toggle active/paused, delete. Offers appear on customer homepage and Offers page.
Support & Tickets	Update ticket status (open / in progress / resolved / closed) with admin notes. Send broadcast notifications to all users, vendors, or customers.

Reports & Audits	Revenue, bookings, halls, vendors summary; monthly revenue; last 30 activity-log entries.
---------------------	---

6. End-to-end business flows

6.1 Vendor goes live

Vendor registers (business name + phone) → status Pending → Admin approves vendor → Vendor chooses subscription plan (dummy pay) → Vendor adds hall (city, pricing, policies, photo) → Hall can be reviewed by Admin → Live halls appear in customer search.

6.2 Customer books a hall

Customer searches by city/date (or GPS) → Opens hall → Picks date/slot → Checkout + 40% advance (simulated) → Booking pending + slot locked → Vendor confirms or rejects → Confirmed booking shows on customer dashboard → Customer can cancel, review, or download invoice.

6.3 Offline (vendor-side) booking

Vendor enters walk-in booking → Confirmed immediately → Calendar marked booked → Amounts appear in vendor finance.

6.4 Status model

Entity	Statuses used
Vendor profile	pending → approved / rejected; later active / suspended
Hall	draft / pending_review / live
Booking	pending / confirmed / completed / cancelled / rejected
Booking slot	morning / evening / full_day
Payment	pending / partial / paid / refunded (booking); completed on payment rows
Availability	available / pending / booked / blocked

7. What this delivery includes vs later work

Implemented now	Not production-complete yet
Full 3-role product UI and workflows; search & maps; booking + calendar sync; vendor approval gate; admin operations (vendors, halls, bookings, customers, plans, payments/refunds, reviews, offers, support, reports); dummy subscription and dummy card payment.	Live Razorpay/Stripe keys; real email sending (mail is logged); persistent production database if hosted on Vercel (needs Neon/Postgres — SQLite /tmp is demo-only); durable hall image storage (local disk is not enough on serverless).

Hosting note for Team Lead: The app is already wired for Vercel (PHP serverless). For real data, use a free Neon Postgres database — not SQLite in /tmp. That is an environment setup step, not a missing product

screen.

8. Screens delivered (by portal)

Portal	Pages built
Customer	Home, Hall list, Hall detail, Book, Checkout, Dashboard, Bookings list/detail, Invoice, Wishlist, Offers, Register, Login, Profile
Vendor	Register, Login, Pending Approval, Dashboard, Hall list/create/edit/preview, Availability calendar, Bookings (+ offline), Customers, Finance, Subscription choose
Admin	Login, Dashboard, Vendors list/detail, Halls list/review, Bookings, Customers, Subscriptions/Plans, Payments & Refunds, Reviews, Offers, Support & Notifications, Reports & Audits

9. Summary for Team Lead

The product is a working three-sided marketplace: customers can find and request halls; vendors can list inventory, control the calendar, take online and offline bookings, and see revenue; Super Admin can approve vendors, control listings, money, reviews, offers, tickets, and reports.

- Customer path is complete from search through booking, invoice, wishlist, and reviews.
- Vendor path is complete from registration and approval wait, through halls, calendar, bookings, finance, and plans.
- Admin path is complete as an operations console, not only a dashboard.
